ADDRESSING HOMELESSNESS

Vision: Ensure a safe place to live for everyone in our community

Background: Homelessness is defined as not having a regular nighttime residence; staying in a public or private place not meant for human habitation; or staying in a publicly-or-privately operated shelter.¹ Homelessness affects both physical and mental health and makes accessing health care more difficult.¹ As a result, people experiencing homelessness face significantly higher rates of poor health outcomes than those who are housed.²

Why This Is Important: As of 2022, 30% of all people in the United States experiencing homelessness resided in California, including half of all unsheltered people (115,491 in California; 233,832 in the United States).³

Renters in Sutter County need to earn \$21.25 per hour 1.4 times the state minimum wage to afford the average monthly asking rent of \$1,105.⁴

People experiencing homelessness are more likely to have substance use problems, mental and behavioral health conditions, physical disabilities, or chronic medical conditions and are more likely to be hospitalized and stay longer in the hospital.⁵
